What I did in the work: (My current project is the most intersting becouce I am main developer which was responsible for the architecture**)**

I Created Web Api Architecture from scratch. I divided project structure into 4 different layers. It was:

Domain layer   Infratusture layer   Application layer
View/Api Layer

I designed the application according to solid rules and best object oriented design patterns.
For example:
- factory
- dependency injection
- programing by contracts
- lazy loadig
- policy authorization and claims

I used swagger library to achieve clear and efective documentation about restful method in the api.

The api was secured by Jwt bearer token. I use azure active directory to achieve it.

I implemented real time notycifaction by means of SignalR freamework.

Whole api was deginged by Plain Old CLR Object and Model first appropach.

I use Entityframework to communicate with datebase.

In part of the system where search functionality was the most important I used azure sotrage and azure search.

In the media press I worked also with the maitaing and developing big system. The system has created since 2006. After six months of work I became the main developer. That system have a lot of technology for example:
- asp mvc
- asp web api
- entity framework
- nhibernate
- npg slql (it was own orm framerork created by people from the company, it was nessesery because application had performance issues)
- jQuery
- kookaut
- angulat js
- apache solr

In that system I worked almost two years. During that time:
- I fixed all the bugs,
- I replaced devart postgresql orm into npg sql
- I integreted the system with outside authorization
- I replaced wcf obsolete method on web api restful methods
- I refactored bad quality code
- I added new funcionality using angular js
…………………..
On the begining my carrer at Media Press, I worked in frontend team. I was developing rich api client which was created only with react js. This project used ecma script 6, so writing a code was more effective. In react I worked only 3 month. I
I realized serveral task for exampe:
- drag and drop pictures functionality (every picture has priority, so user could set it using the mouse)
- antoher functionality it was displaying the lists of the tv senders and real time search
- I also created the view which allow post, update and delete data about tv senders

Sometimes I created own css styles, because bootstrap styles it was not wnough.

_____SABRE_____

At the sabre company I worked in the team in which the quality of the code was the most important. When we implemented new functionality we always wrote unit tests. My teams consist mainly senior developers, two qa's, product owner and scrum master. I was a full stack developer which worked in .net mvc and angular js. We developed app store, similar store to google play store.

During that time I realized how important is the code quality, I knew design patterns, solid rules, unit tests and good programing practices.

_____SAPICO_____

At the sapico company:

My most tasks were realted to developing mvc application and wcf communication.

As fulstack developer I worked also with sql. I created databse views, functions, stored procedures and indexes.

In mvc applications mainly i used knockout js, ajax, boostrap and linq.

I also worked witg xml documents security. I used sart card to encryption, decryption and digital signature. During that task i use wcf technology to retrieve and insert xml documents to database.

The last of my bigger taks were related with integration crm system with call center service.
I used WCF to send the data to the call center and afrer processing I saved the data in the crm system.

4.Hoby questions

I have a lot of hobby and interests. I really like read books about programming and watch pluralsight. Plularsight is the world's largest training library for programmers and it allow easy increase knowledge aobut good practice in programming. Apart from programming I really like swimming and dancing it is very pleasure for me. During dancing I forget about my all my tensions and relax myself. I also love enjoy with my friends and play in tennis.
